1949 New Vegetable Varieties for Market Growers

It is good business for you to know about the new vegetable varieties as the seed becomes commercially available. They may contain the answer to more production, better quality, and thus more profits from your crops. . . . It is part of our job to tell you about these new varieties. . . . They are destined in our opinion to become widely used as commercial varieties in many sections of the country. . . . If you grow any of the vegetables represented by these new varieties, we suggest that you try them on a moderate part of your acreage. See how well they do for you.

New TOMATO SIOUX

Variety Yield Tests Place It Among the Most Productive with Highest Yields of U. S. No. 1 Grade Tomatoes.

Selected from a cross between All-Red and Stokesdale; the fruits mature two weeks earlier than Rutgers or Marglobe.

The fruits are almost globe shape, of medium size; light green, ripening into a solid red. Flesh walls thick; meaty centers, with practically no hard core. The vine growth, although relatively open, is adequate to protect the fruits from the sun. Set the plants 4 to 5 ft. apart. Closer planting may result in greater yields but smaller fruits.

LETTUCE - Progress

See Front Cover Illustration

Darker green, thicker leaved, more resistant to tip burn, and a few days earlier than Imperial No. 44. The Bureau of Plant Industry, U. S. Department of Agriculture, Beltsville, Maryland, and the New Jersey Agricultural Experimental Station have had this variety under trial for several seasons. For the past three seasons it has been in trial in several locations in the Eastern states, and it appears to be well-adapted as an early-maturing, tip burn resistant lettuce.

ALL-AMERICA SELECTIONS—1949
BRONZE MEDAL WINNER

As round and as red as a cherry—Tops short, bulbs round, color cherry red—Outstandingly uniform in size, shape and color—Unexcelled for greenhouse or hotbed forcing—Excellent for planting in late spring, summer or early fall, either on muck or upland.

Not recommended for outdoor planting in early spring, when cool nights and short days tend to retard top growth.

Bush Lima Bean TRIUMPH

SILVER MEDAL WINNER—ALL AMERICA SELECTIONS 1949

Recommended for canning and freezing and wherever a high quality Baby Lima is desired. Triumph Lima Bean is the result of a cross between Fordhook Bush Lima and Sieva Pole Lima. A U. S. Department of Agriculture product, it was selected as a variety of high eating quality and small seed size.

The pods are the same length as Henderson, but narrower and thicker. The beans are three to four in number; tightly packed in the pods; uniform light green seed coats; approximately same sieve size as Henderson, but heavier because of thickness. The bright-green color holds in the canned beans. The plants are as wide as Henderson, but slightly shorter and more compact. The pods are borne in clusters under the foliage near the base of the plants. Season 70 days.

Bush Bean SUPERGREEN

Try it in Place of Tendergreen for Yield and Quality

ALL-AMERICA BRONZE MEDAL WINNER—1948

Here is an outstanding quality bean that is also an excellent producer. The pods are 6 to 7 inches in length, round, slim, smooth, dark green and stringless in all stages. Compared with Tendergreen the pods are slightly longer and somewhat more slender.

Supergreen originated from a cross between Idaho Refugee and Full Measure, later back-crossed with Full Measure, and selected for Mosaic resistance together with high yield and excellent quality. Season 52 days.

New TOMATO WISCONSIN No. 55

The fruits are larger than Rutgers, with maturity only slightly later than John Baer or Bonny Best.

Peak harvest is reached considerably earlier than Rutgers, slightly later than John Baer. Vine growth is luxuriant, although open, for moderate shading. Branching is characteristic, bifurcated main stem appearance resulting in sprawling open growth. Pale green fruits, darker at stem, ripen uniformly scarlet red, somewhat flattened or 80% depth to width, fleshy center with 5 to 6 locules well filled. Fruits are large in wet or dry conditions, larger than John Baer, Rutgers and Stokesdale. It seems widely adapted, early, large, good color and tolerant to early blight and free from cracks.

HENDERSON'S VEGETABLE SEEDS

The Choice of Progressive Market Growers

All of the varieties listed in this catalog were bred and selected with one object in mind, and that is to produce profitable crops for the commercial grower. Our offerings include the most desirable types for the long distance shipper, as well as those that appeal primarily to the local market trade. Whether your market is far or near, Henderson's seeds produce the crops that bring good returns.

As some of the stocks of our Famous Strains of Superior Vegetable Seeds for Market Growers are extremely limited this year due to crop shortage, we urge our customers to place orders as early as possible.

SEASONS INDICATED ARE APPROXIMATE FROM THE SETTING OUT OF THE PLANTS

We have always controlled Henderson's Snowball and Primosnow Cauliflower, any statement to the contrary notwithstanding, and unless the seed is bought directly from us, you do not get the genuine, as we do not supply dealers. Sold only in sealed packets.

HENDERSON'S SNOWBALL

Excellent for Forcing—Dependable for Spring Crop—Unsurpassed for Fall Planting.

Market Growers the world over have used this strain year in and year out since it was first offered many years ago. We are continually receiving letters testifying to the dependability and general excellence of Henderson's Snowball. The widespread demand for this strain clearly indicates that it is adapted to the widest range of soil and climatic conditions of any variety of Cauliflower in existence.

The plants are of medium height, sturdy and vigorous. The outer leaves are of upright growth, while the inner ones fold over in such a way that the "flowers" are completely protected until they have reached a good size. The heads are uniformly large, deep, very solid, snow white, and under normal growing conditions are entirely free from leafiness. Attractiveness and quality are unequalled. Season 65 days.

HENDERSON'S PRIMOSNOW

This outstanding extra early variety was introduced by us and is now recognized as the leading first early variety. The heads or "flowers" possess many of the characteristics of our famous Snowball—good form, good size, great depth, and a beautiful snow-white color, free from riciness or leafiness. The plant is sturdy; the foliage of fine form; the inner leaves being incurved give ample protection to the developing "flower". Primosnow is the earliest high quality Cauliflower that has ever been developed. It is ready to cut fully 8 to 10 days before such strains as Snowball or Erfurt and is of such uniform maturity, that practically the entire crop may be cut at one time. Highly recommended for market growers and shippers. Season 55 days.

Henderson's Famous Snowball

SUPER SNOWBALL

This is an extra early strain of the Snowball type. Besides being extra early, the heads or "flowers" mature with greater uniformity, making it possible to harvest a large percentage of the crop in the first cutting.

The plants are vigorous and strong. The leaves, especially the inner ones, are well folded or curled over the heads. The heads are large, uniform in size, deep, and solid. They mature early and many times the entire crop is harvested before any heads of the later types are ready. One of the most profitable varieties for market. Season 55 days.

Price	\$2.75	\$5.00	\$18.00	\$54.00

EARLY SNOWWHITE (SPECIAL NO. 25). We are pleased to offer this new outstanding early variety. It has shown up well in our Cauliflower trials, and the commercial growers who have tried out this new type, are very enthusiastic about its merits. The plants are sturdy and somewhat taller growing than Primosnow. The inner leaves fold over the heads and overlap each other in such a way that added protection is given to the "flowers" until they are well developed. Even the outer leaves which are straight and upright, are inclined to curve inward at the tip.

The heads are large, of a uniform size, very deep, solid, exceptionally heavy, pure white, and of the highest quality. The well formed tight curd gives the heads a most attractive appearance. In season EARLY SNOWWHITE is a few days later than Primosnow, but practically as uniform in maturity. Season 59 days.

This variety is slow to produce seed stalks, and decidedly resistant to tip burn. Season 80 days.

NEW YORK

We introduced this noted variety many years ago. It has been extensively grown in all sections of the country, and although not as popular today since the introduction of the earlier New York types, is still used in large quantities in many localities. The plants are large, with dark green outer leaves, which are slightly curled on the edges. The heads are large, very solid, well blanched, crisp, sweet, and are slow to run to seed. Our strain is noted for its uniformity and large sized heads. Season 80 days.

Price	35c	\$1.15	\$3.40

NEW YORK NO. 12

This is an earlier selection from Henderson's New York. It is very sure heading and better adapted to warm weather than the original type. The plants are compact with few outer leaves, and head with great uniformity. The heads are slightly flattened, solid, and of a large even size. The most dependable of the New York types, especially under varied growing conditions. Season 80 days.

Price	35c	\$1.15	\$3.40

NEW YORK NO. 515

An early type of New York which in appearance resembles New York No. 12, but is brighter green in color. The heads are well formed, solid and very attractive. It is also dependable in heading and well adapted to a wide range of soil and growing conditions. Highly recommended. Season 80 days.

IMPERIAL NO. 44

This new Iceberg type was developed by Dr. I. C. Jagger of the U. S. Department of Agriculture. During 1936 and 1937 successful test plantings of Imperial No. 44 were made in lettuce growing muck districts of the East. It is now an established variety for muck sections. Although not extensively tried on upland soils, we believe it will be suitable there as well. Imperial No. 44 produces large, hard, well formed heads, uniform in size. In comparative test plantings, it has produced a good percentage of hard heads when nearby plantings of commercial strains proved worthless. Season 82 days.

CLOVERS

CRIMSON or SCARLET (*Trifolium incarnatum*). Plowing under a good crop of Scarlet Clover is equivalent to 20 tons of stable manure per acre and even if the Clover be harvested or pastured, the benefits derived from the wonderful nitrogenous root formation will alone many times repay the cost of seed and labor. Crimson Clover cut when coming into bloom makes hay richer in protein than Red Clover, and the yield on average soils is two to three tons per acre. It is especially adopted for green forage and silage and is much relished by dairy stock. Cut green before flowers mature.

Crimson Clover should not be fed after the flowers mature for the hairs of the calyx are apt to form "hair balls" in the stomachs of animals.

Sow at the rate of 15 pounds of seed per acre, either broadcast or drilled. Cover lightly with a harrow. In the latitude of New York City sow from July 15 to September 15, and in the South as late as October. Time of flowering is June; height 2 feet.

For pasture, helps the grasses by adding nitrogen to the soil, thrives on all soils and is relished by cattle.

ASTERS

The Improved Strains of China Asters, the showiest and most useful of our Summer Cut Flower Annuals, are now staging a remarkable comeback with the development of the wilt resistant strains.

WILT RESISTANT STRAINS

Through the use of wilt resistant seed, success may be had where the soil is infected with wilt fungus, where it has been impossible to grow perfect flowering plants. It is not claimed, however, to be immune from Aster "yellows" and other Aster diseases or insect pests.

Henderson's Famous Invincible

The flowers are the most beautiful formed of all large Asters. When well grown the flowers of Henderson's Invincible Asters average 3½ inches across; 4-inch flowers are quite common, if grown especially for cut flowers and the side branches pruned, allowing a plant to carry not over 8 or 10 flowers, one flower to a stem.

GLADIOLUS

HENDERSON'S "UP-TO-DATE" NAMED VARIETIES

This list of named Gladiolus comprises our choice in the fields after studying and comparing the merits of hundreds of varieties, consideration being given to healthy growth, size, form, coloring and substance of flowers, properly spaced and faced on strong, straight, upright stems, etc. We therefore believe that this selection is unsurpassable. First size number one bulbs.

Every precaution is taken to supply clean stock; all of our bulbs are thoroughly cleaned, fumigated and dipped to destroy thrip and other insects.

When planting in sections where Thrip is prevalent we recommend as an extra precaution, soaking the bulbs for six hours in a solution of Lysol disinfectant, mixing four teaspoons to one gallon of water.

AN EFFECTIVE METHOD FOR CONTROLLING THRIP ON GROWING PLANTS

Make careful examinations of plants when 5 to 6 inches high. If silvery spots are noticed on the foliage spray with the following solution: two ounces of Tarror Ene, eight ounces brown sugar, honey or syrup in three gallons of water, apply every ten days if necessary. Another effective remedy is to spray the plants with D.D.T. (5%) when the foliage is 5 to 6 inches high and continue every 12 days until the lower bud on each plant shows the first sign of color. Directions on each container.

A WONDERFUL SCIENTIFIC DISCOVERY NOW MADE AVAILABLE TO ALL GARDENERS IN THE JAPANESE BEETLE ZONE

JAPIDEMIC (Milky Disease Spore Dust)

Nature's Control Medium Which Destroys the Beetle Grub.

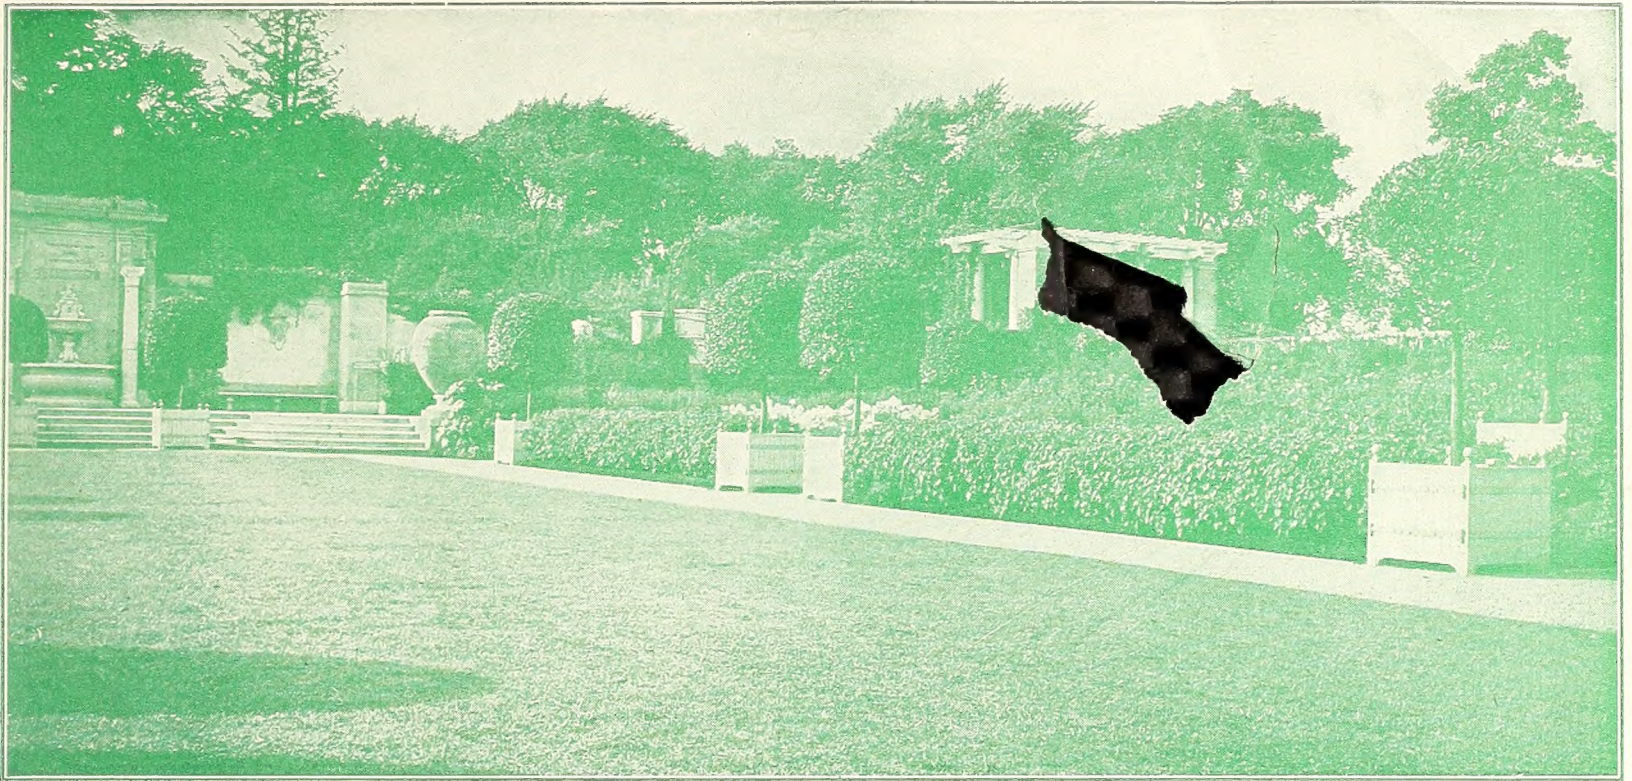

Japidemic contains the living spores of the bacterium (*Bacillus popilliae*)

which causes the milky disease of Japanese Beetle grubs. After years of study of a number of disease causing organisms by the Bureau of Entomology of the United States Department of Agriculture, it was found that the bacteria of the milky disease is the most effective, as it multiplies rapidly in the beetle grub and soon causes its death. **Japidemic** is distributed on top of the ground or on turf in grub infested areas. It is not to be used as a spray, as it has no direct effect upon the adult beetle. One treatment under favorable conditions will permit the rapid spread of the disease, and destroy the grubs within the area. The bacteria remains alive for a long period, and is ready to infect and kill successive broods of Japanese beetle grubs as they move about in the soil, feeding on plant roots.

Japidemic is harmless to grass and other plant life, and has no ill effects on human beings or warm blooded animals. **JAPIDEMIC** is a biological product requiring exacting laboratory equipment, which of necessity limits the quantity in which it can be produced. One pound will treat approximately 4,000 square feet.

Price ½ lb. \$2.75; 1 lb. \$5.00 postpaid U.S.A.

Sow The "Henderson" Lawn Grass Seed

and Obtain a Grassy Carpet of Unrivalled Emerald Green
IN FOUR WEEKS FROM SOWING IT IS READY FOR MOWING

Henderson's celebrated Lawn Grass Seed Mixture has been thoroughly tested by a country-wide use during three-quarters of a century. It is the fruit of years of our personal experience and study, coupled with that of many of America's foremost gardeners, who steadfastly maintain and unite with us in saying that it has no superior for American conditions and the American climate. The rapidity with which it will form a deep green velvety turf, has been the delight of gardeners since its introduction, for, under ordinary conditions, the bare soil will be clothed with an emerald carpet of living green in four weeks' time.

PRICE OF "HENDERSON" LAWN SEED

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	\$4.50	\$8.50	\$20.00	\$38.50	\$75.00

STANDARD LAWN SEED

This is a blend that is far superior to the low priced lawn seed usually offered. It should be of special interest to florists and contractors for use on development projects. Although this seed is not recommended for a permanent lawn, like the Henderson blend, it does not, on the contrary, give a flash-in-the-pan, but produces a fine durable turf. Sow at the rate of 1 pound to 200 square feet.

	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	\$7.50	\$18.00	\$32.50	\$60.00

TOUGH TURF

The turf required for outdoor sports must be closely interwoven, firm, elastic, smooth, and durable to stand the wear and tear. These requirements are met in this mixture, which is composed of fibrous, deep-rooting Grasses that spread and intermingle. The seeds are blended in the proper proportions to form and maintain a tough matted sward, constantly green, even in dry weather.

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	\$4.50	\$8.50	\$20.00	\$38.50	\$75.00

TERRACE SOD

This is a special mixture of Grasses best suited for sowing on terraces, embankments and hill-sides; Grasses that produce long, strong, spreading roots, thus preventing heavy rains from washing them out; that will withstand drought, thrive on shallow soils, and at the same time produce a rich, velvety-green turf throughout the season.

Price	\$5.00	\$9.50	\$22.50	\$44.00	\$85.00

SHADY NOOK

The Ideal Mixture for Shaded Areas

On nearly all lawns there are unsightly bare spots under the shade of trees, which have baffled all efforts to get into Grass, but with this mixture there need be no further difficulty. It is a combination of fine, dwarf growing, evergreen varieties, which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. Ground that has been densely shaded by trees is frequently "sour," and if the drainage is defective it is apt to be covered with moss and coarse Grasses. In such cases an application of slaked lime, at the rate of one hundred pounds to each thousand square feet, or two tons to the acre, is an excellent corrective and sweetener, but the moss should be first raked off.

PRICE OF SHADY NOOK

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	\$5.00	\$9.50	\$22.50	\$44.00	\$85.00

SPECIAL "BENT FORMULA"

A combination of the finest re-cleaned Grasses, using as a basis for this mixture the imported and domestic Bent Grasses which are so largely used in the finer Putting Greens of today.

A lawn seeded with this mixture and properly cared for will in truth make every lawn a Putting Green. On a lawn of this type, Clock Golf and other lawn games may be enjoyably played.

It is imperative in maintaining a lawn of this type, that the grass should be kept cut short and well rolled all through the season. Starvation of the grass plants is most frequent cause of unsatisfactory lawns, and grass needs constant small applications of fertilizer and plenty of water to maintain a perfect lawn.

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	\$6.00	\$11.75	\$28.50	\$56.00	\$110.00

SEASIDE

Our "Seaside" mixture will make a good turf of green on sand where the finer Grasses will not thrive. Of course, the sand must be top-dressed with not less than 2 inches of soil before even our "Seaside" Grass Seed is sown, to enable the young Grass to get a start, after which the long roots—peculiar to the varieties we used in this mixture—drive down deeply in the sand and remain permanently self-sustaining, if attention is given to sprinkling during dry weather.
